We used a range of MAXI-TUBE® product sections in the KWIKSURE steel frame of the Swimming Centre we designed and constructed. The product assisted in delivering the point difference we needed to achieve the best project result.

The benefits were the durability for this harsh environment, lead time reduction compared to batch coated product, and the architectural finish. We would recommend the use of MAXI-TUBE when you are aiming to achieve these advantages and other benefits that are offered by MAXI-TUBE® which Orrcon Steel manufactures and distributes.
